Specialist experience where it matters

Practical knowledge built on site

Martyn Young Fireproofing Consultancy Ltd has specialised in fire protection and fire-prevention work since 1989. We support property owners, architects, surveyors, contractors and building professionals from initial inspection through to an appropriate technical solution.

Our approach combines careful observation, product knowledge and hands-on installation experience. This allows us to identify practical solutions for new construction, refurbishment, historic buildings and difficult existing conditions.

35+

YEARS' SPECIALIST EXPERIENCE

Independent advice and practical delivery

The Bone Mill, Charfield - protection to timber and structural steel in a historic building.

Who we assist

- Fire-risk assessors and compliance consultants
- Building contractors, developers and design teams
- Architects, surveyors and property managers
- Owners of historic, listed and unusual buildings

Fire strategy, design reviews & advice

Supporting safer, buildable decisions

Early specialist input can help establish a clear fire-safety approach and identify passive fire-protection issues before they become costly site problems. For suitable projects, we can prepare a proportionate fire-strategy report or undertake a focused design review based on the drawings, proposed works and information available.

FIRE STRATEGY & DESIGN REVIEW

- Project-specific fire-strategy reports
- Compartmentation and fire-stopping provisions
- Fire doors, escape routes and service penetrations

PROJECT SUPPORT

- Site inspections and written observations
- Remedial or compliance-review reports
- Liaison support with the wider project team

Historic Manor House, Bristol - practical passive fire-protection solutions for an existing building.

A clearly defined service

The scope is agreed for each instruction and reflects the building, proposed work and information available. Advice may address means of escape, compartmentation, fire-resisting construction, fire doors and the integration of passive fire protection.

IMPORTANT SCOPE NOTE

Fire-strategy and design-review services are accepted only where they fall within our competence and agreed scope. They do not replace a statutory fire-risk assessment or specialist fire-engineering analysis; where either is required, we will identify the need for an appropriately qualified professional.

Passive fire protection services

Oriel House, Cheltenham - fire-stopping to service penetrations within riser cupboards.

Comprehensive protection for building and M&E services

- Fire-stopping to pipes, cables, trays and building-service penetrations
- Fire-rated barriers to roof voids, under floors and concealed cavities
- Protection to structural steel using suitable intumescent coating systems
- Intumescent coatings to suitable timber, walls, ceilings and historic panel doors
- Remedial compartmentation and maintenance work arising from fire-safety reports
- Supply of passive and intumescent products from reputable manufacturers

Every proposed detail must be matched to the supporting construction, service type, opening size and required fire resistance - there is no universal fire-stop detail.

Fire doors & existing buildings

Withyholt Court, Cheltenham - new FD30 fire doorset photographed during installation.

Protecting escape routes

Fire doors are critical to controlling smoke and fire spread. We inspect existing doors, identify defects and recommend proportionate remedial work. Where upgrading is unsuitable, we can advise on or install a new fire doorset to the agreed specification.

SERVICES INCLUDE

- Condition inspections and gap surveys
- Intumescent and smoke seals
- Closers, hinges and ironmongery protection
- Threshold seals and suitable remedial upgrades
- New FD30 fire doorsets, where specified
- Historic and panel-door upgrade solutions

EXISTING AND HISTORIC BUILDINGS

Older buildings often require careful investigation rather than a standard detail. We consider the existing fabric, conservation constraints and the intended fire performance before recommending a practical route forward.

Surveys, specifications & certification

From inspection to documented completion

We regularly support fire-risk assessors and compliance consultants by helping their clients address passive fire-protection and compartmentation issues identified in existing reports. Our involvement can be tailored from an initial visit through to specification, product supply, installation and completion records.

01

SURVEY

Site inspection, review of drawings, existing fire-risk assessment recommendations and identification of priority issues.

02

SPECIFY

Practical recommendations, product selection and installation guidance for agreed locations.

03

DELIVER

Supply-only technical support or specialist installation, depending on project requirements.

04

RECORD

Photographic records, fire-stopping logs and certification appropriate to the work undertaken.

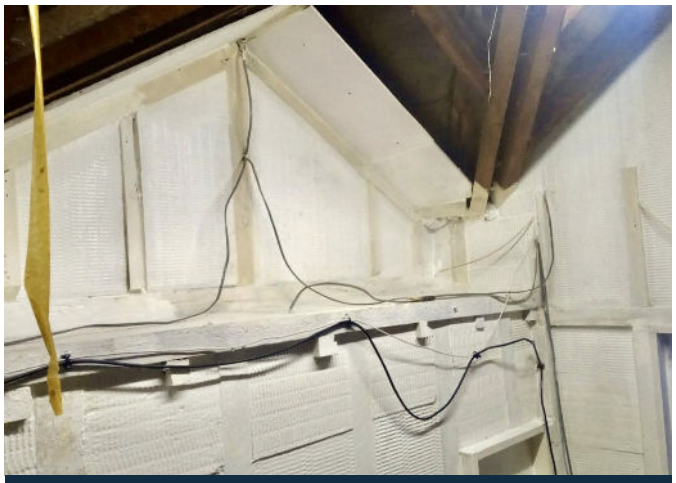
CERTIFICATION WITHIN THE AGREED SCOPE

Certificates describe the products or systems used, the stated performance, installation location and relevant supporting references. Certification is limited to the work inspected, supplied or installed and does not certify unrelated elements or specialist systems.

Selected project experience

THE BONE MILL, CHARFIELD

Timber and structural steel fire protection.

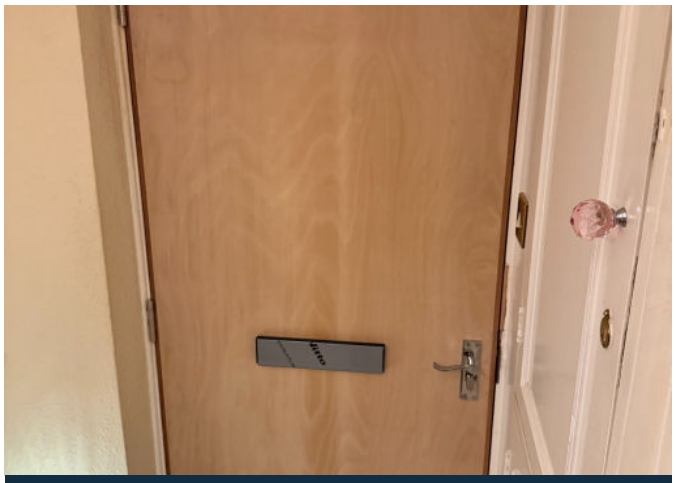


THE GARTH NURSING HOME, KINGTON

Roof-void fire barriers and compartmentation.

ORIEL HOUSE, CHELTENHAM

Fire-stopping within service riser cupboards.



WITHYHOLT COURT, CHELTENHAM

Installation of a new FD30 fire doorset.
